

ARCTIC MARINE PROTEIN

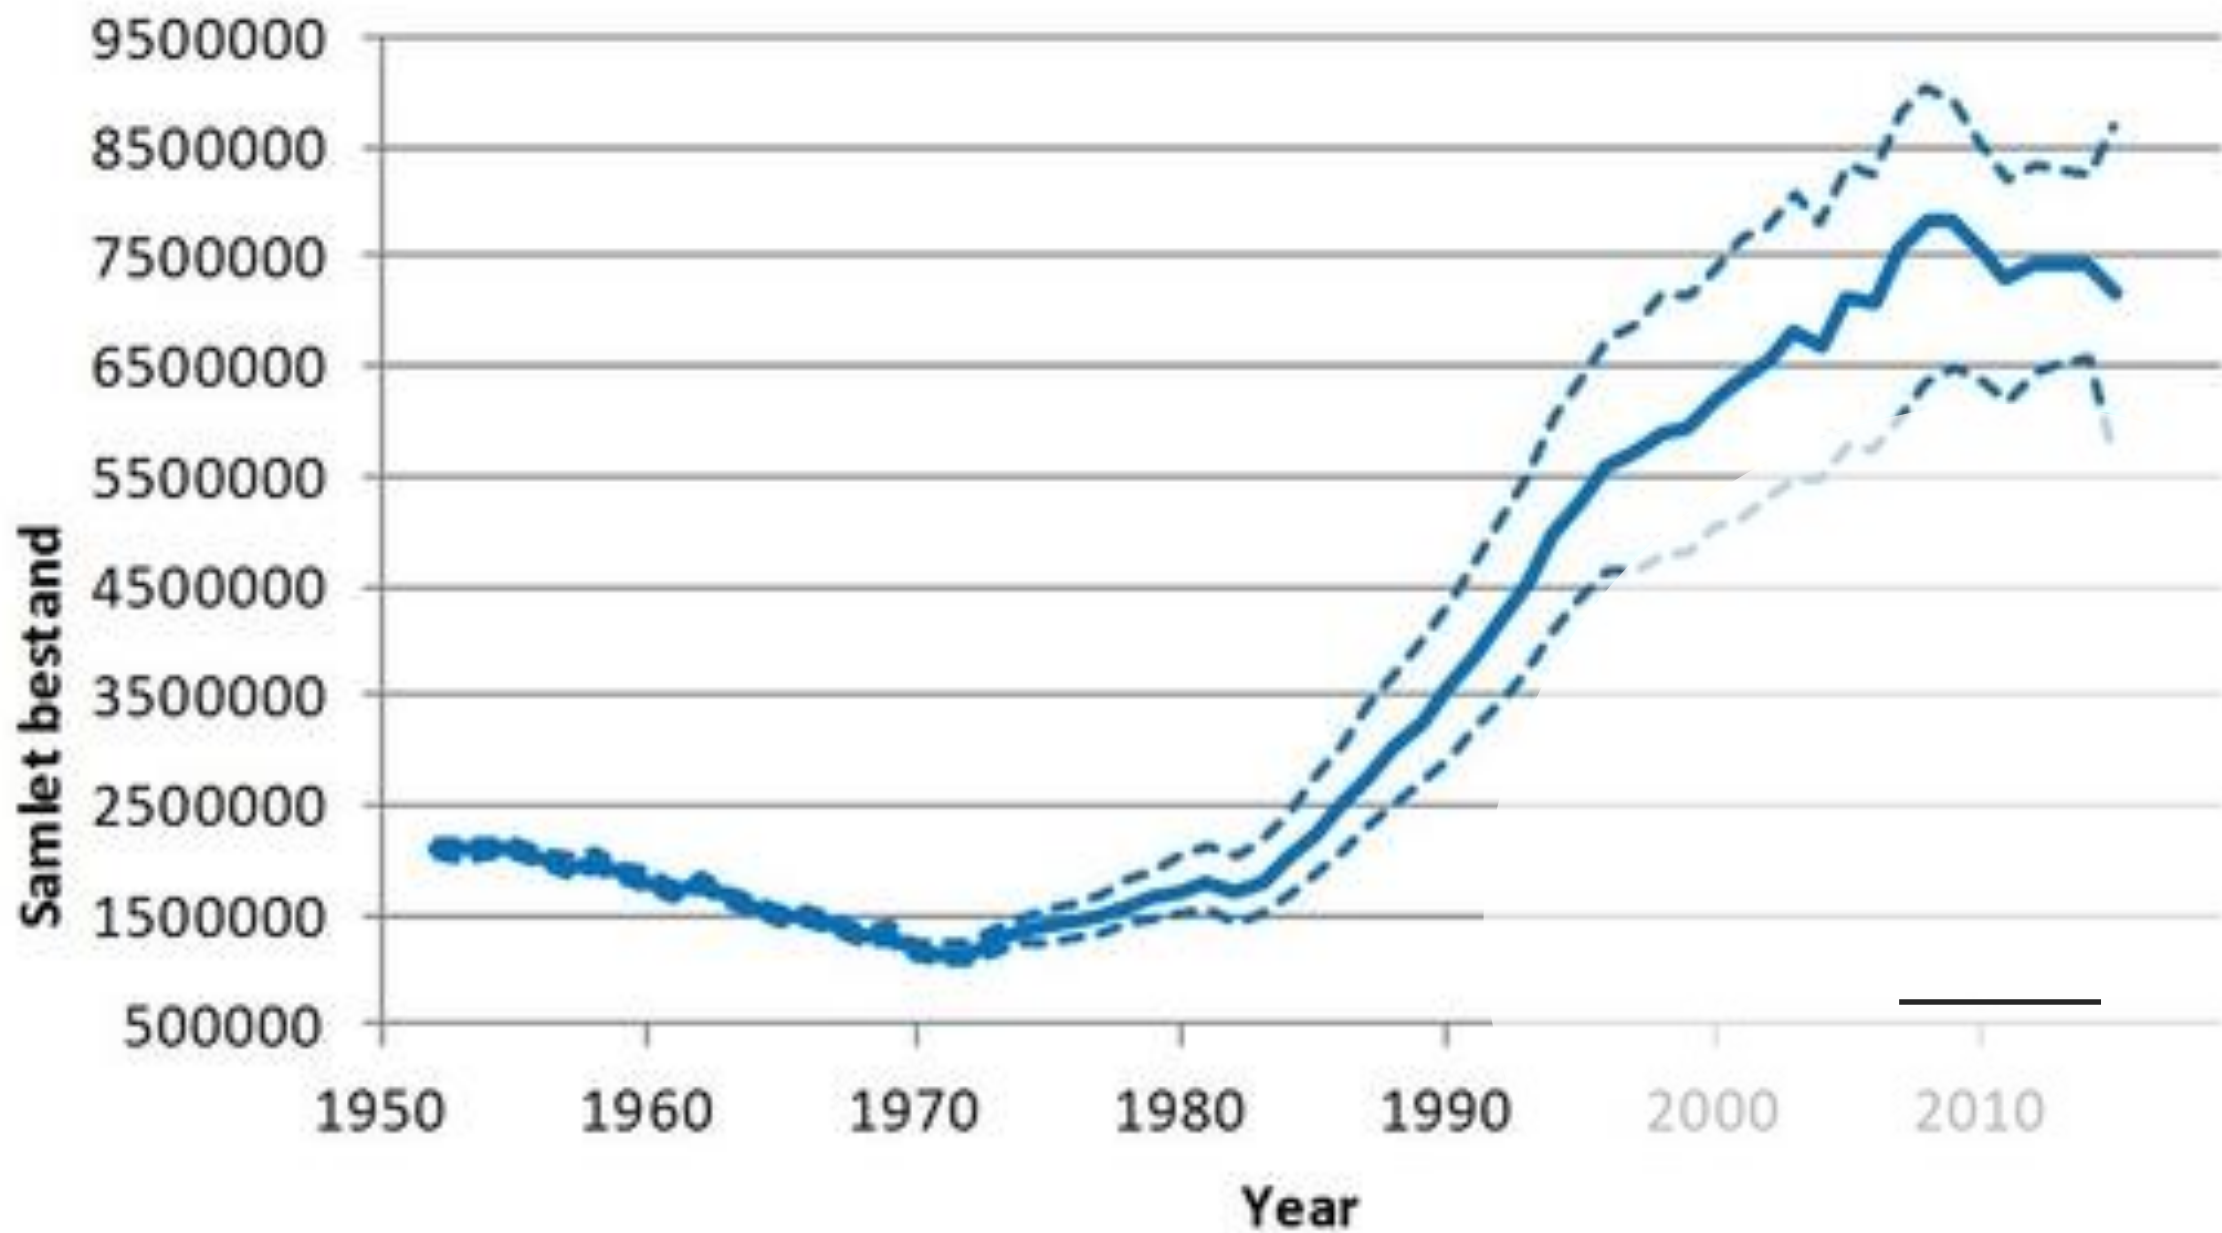

SEAFOOD IMPROVEMENT

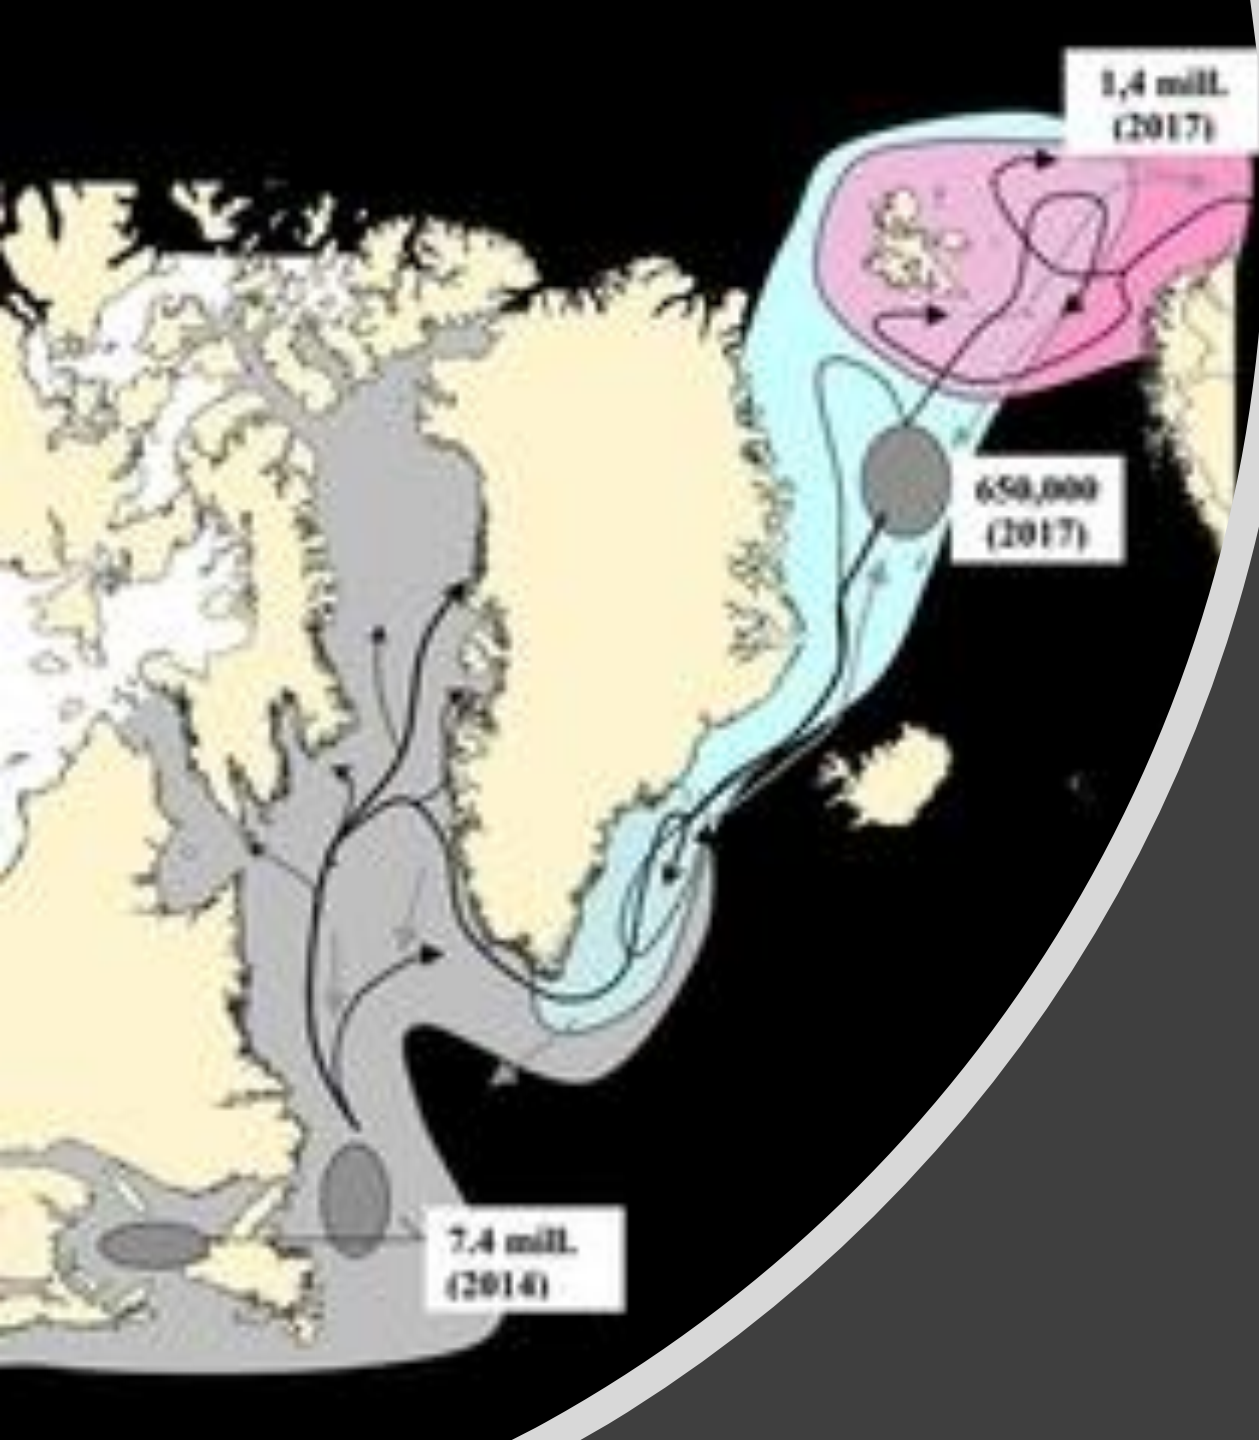

Are the growing marine mammal populations in West Greenland reducing the potential fisheries yields?

Answer: Yes/No

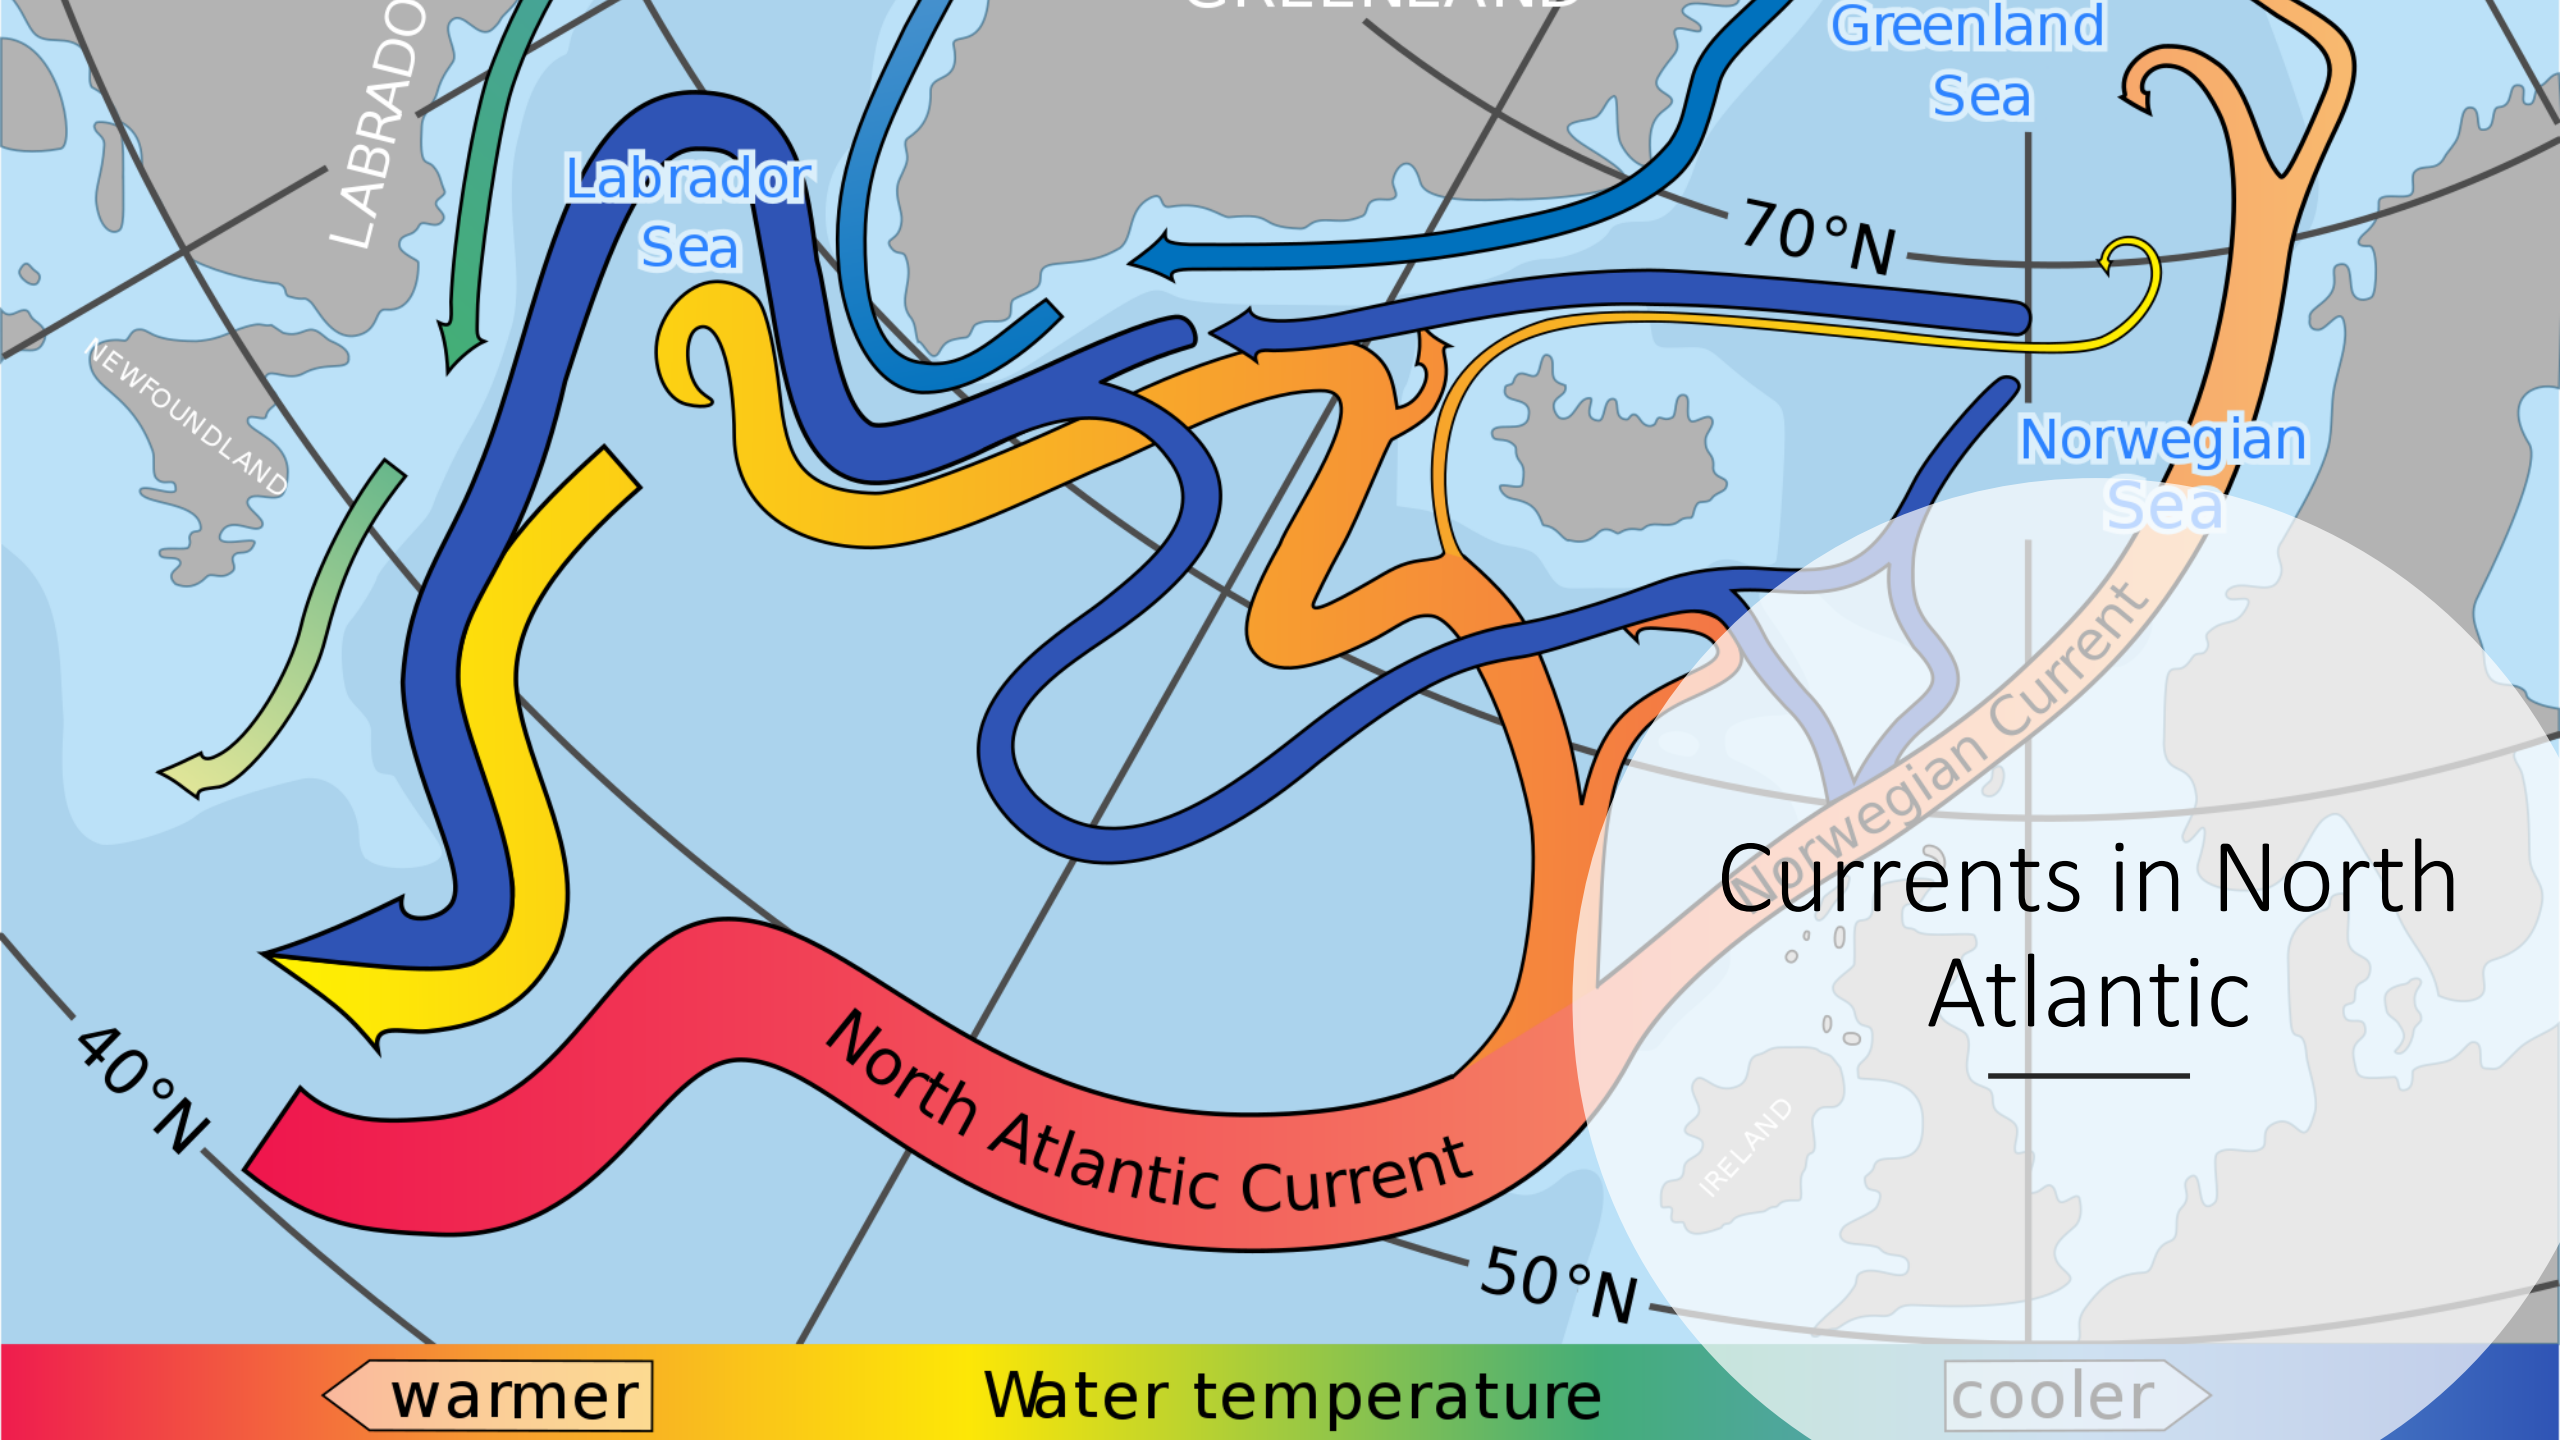

Collapse of Atlantic cod stocks (East Coast of Newfoundland),

Breedings and foraging areas for Harp Seal

Currents in North Atlantic

warmer

Water temperature

cooler

Alternativ

- 1.000.000 mt. = 250.000 t protein
- Salmon food
- Mixed 15% protein = 1.670.000 t. food
- Eatable salmon 65 % = 1.085.000 t.
- Worth 10.855.000.000 €
